

SAI TEJA ATTALURI

AWS DevOps Engineer · Cloud Infrastructure · Kubernetes · Terraform · CI/CD · IaC · GitOps

Hyderabad, India · atalurisajteja@gmail.com · +91 9100084218 · [linkedin.com/in/attaluri-sai-teja](https://www.linkedin.com/in/attaluri-sai-teja) · attalurisajteja.space · Immediate Joiner

PROFESSIONAL SUMMARY

DevOps & Cloud Platform Engineer with 4+ years of hands-on experience building scalable, fault-tolerant AWS infrastructure, automating CI/CD pipelines, and orchestrating containerized microservices on Kubernetes. Proven track record: **reduced deployment effort by 40%, achieved 99.9% uptime, cut RTO by 60%, and reduced infrastructure costs by 35%**. Experienced in event-driven architectures (AWS Lambda + SQS), GitOps (ArgoCD), Disaster Recovery design, and cloud cost optimization. Immediate joiner seeking a high-ownership DevOps/SRE role at a product company or growth-stage startup.

CORE COMPETENCIES

✓ Cloud Infrastructure Automation ✓ CI/CD Pipeline Design ✓ Container Orchestration (K8s / ECS) ✓ GitOps (ArgoCD) ✓ Event-Driven Architecture (Lambda + SQS) ✓ IaC (Terraform + Ansible) ✓ Observability (Prometheus / Grafana) ✓ Cost Optimization ✓ Disaster Recovery & RTO/RPO Planning ✓ DevSecOps & IAM ✓ Multi-Cloud (AWS + GCP) ✓ Agile / Scrum

TECHNICAL SKILLS

Cloud: AWS (EC2, VPC, S3, IAM, ALB, RDS, Route53, CloudWatch, EBS, Auto Scaling, Lambda, SQS, CloudFront, ECS, EKS, CloudFormation), GCP (GCS, Compute Engine, gsutil)

Containers & Orchestration: Docker, Kubernetes (EKS, ECS), Deployments, Services, ConfigMaps, Namespaces, Rolling Updates, Liveness/Readiness Probes, HPA

CI/CD & GitOps: Jenkins (distributed master-agent, Groovy scripting), ArgoCD (GitOps), GitHub Webhooks

Infrastructure as Code: Terraform (modules, remote state, workspaces, DynamoDB locking), Ansible (playbooks, roles, Jinja2, Vault), CloudFormation

Event-Driven & Serverless: AWS Lambda, SQS, SNS, CloudWatch Events — event-driven microservice patterns

Monitoring & Observability: Prometheus, Grafana, AWS CloudWatch (alarms, dashboards, log insights, metric filters), SNS alerting

Disaster Recovery: RTO/RPO planning, RDS snapshots, S3 cross-region replication, Route 53 failover, CloudFormation rebuild templates

Security / DevSecOps: IAM least-privilege, Security Groups, NACLs, WAF, Ansible Vault, secrets management

Scripting & OS: Bash automation scripting, Linux (Ubuntu, CentOS, RHEL) 4+ years, Windows

Build & Artifact Management: Maven, Nexus Repository Manager, Docker Hub

Web & App Servers: Apache HTTP Server, Nginx, Apache Tomcat

Version Control: Git, GitHub — branching strategies, PRs, repository management

EMPLOYMENT EXPERIENCE

AWS DevOps & Cloud Platform Engineer | **Swift Solution Pvt Ltd, Bengaluru** | January 2022 – Present

- ▶ Reduced manual deployment effort by 40% across QA, UAT, Pre-Prod, and Production by designing end-to-end Jenkins CI/CD pipelines with GitHub webhook triggers, parallel build stages, and automated rollback on failure.
- ▶ Achieved 99.9% platform uptime for large-scale SaaS environments by provisioning fault-tolerant AWS infrastructure using reusable Terraform modules — VPC, EC2 Auto Scaling, ALB, RDS multi-AZ, and IAM least-privilege roles.

- ▶ Cut RTO by 60% and maintained RPO within 1-hour thresholds by automating Disaster Recovery workflows: RDS snapshots, S3 cross-region replication, CloudFormation rebuild templates, and Route 53 health-check failover.
- ▶ Reduced infrastructure costs by 35% through EC2 rightsizing using CloudWatch metrics, S3 lifecycle policies, and workload migration to ECS-managed containers — directly impacting company cloud spend.
- ▶ Reduced API latency by 45% and achieved global delivery under 50ms by building event-driven microservices with AWS Lambda + SQS and configuring CloudFront distributions with optimized cache behaviors.
- ▶ Eliminated configuration drift across 20+ Linux servers by authoring reusable Ansible playbooks and roles with Jinja2 and Vault, automating network config and security hardening — cutting setup time by 60%.
- ▶ Improved platform resilience by orchestrating containerized microservices on Kubernetes (EKS) and ECS using YAML manifests for rolling updates, health probes, ConfigMaps, HPA, and auto-scaling policies.
- ▶ Reduced MTTD by 50% by implementing Prometheus alerting rules, Grafana dashboards, and centralized log management with CloudWatch Log Insights, custom metric filters, and SNS-integrated alarms.
- ▶ Accelerated Kubernetes delivery by 30% by implementing ArgoCD GitOps workflows with automated sync policies, health monitoring, and rollback management.
- ▶ Maintained 100% SLA compliance leading incident management for 24x7 on-call rotations — systematic root-cause analysis and cross-team coordination to restore platform health within SLA windows.

PROJECT EXPERIENCE

NetConnect – Network Infrastructure Modernization Client: NetConnect Solutions, USA Role: **DevOps Engineer**

- ▶ Designed end-to-end Jenkins CI/CD pipelines integrated with GitHub — reduced deployment effort by 40% and eliminated manual build triggers across all environments.
- ▶ Deployed containerized microservices on Kubernetes with YAML manifests for auto-scaling, liveness/readiness probes, and zero-downtime rolling deployments.
- ▶ Built reusable Terraform modules for AWS infrastructure provisioning; automated EC2 bootstrapping using user data scripts.
- ▶ Automated server configuration using reusable Ansible playbooks with Jinja2 templates; managed multi-environment inventory for consistent infrastructure state.
- ▶ Migrated applications from on-premises to GCP (Compute Engine + GCS) using gsutil and GCP REST APIs with zero data loss and zero downtime.
- ▶ Configured ArgoCD for GitOps-based continuous delivery to Kubernetes — Git-synced application state with deployment health monitoring via ArgoCD UI.

Policy Management System Modernization Client: GreenField Mutual Insurance, USA Role: **DevOps Engineer**

- ▶ Deployed and managed containerized application components on Kubernetes (EKS) using YAML manifests with rolling update strategies, liveness/readiness probes, and ConfigMaps for environment-specific configuration.
- ▶ Configured Jenkins with distributed master-agent architecture for parallel builds across Windows and Linux environments, enabling scalable CI pipelines.
- ▶ Designed AWS VPC architectures with public/private subnets, Security Groups, NACLs, cross-region VPC Peering; enforced IAM least-privilege access across all resources.
- ▶ Managed S3 bucket policies, versioning, and lifecycle rules to transition aging data to Glacier for cost-optimized, compliant long-term backup.
- ▶ Deployed WAR and JAR applications to Apache Tomcat via Jenkins pipelines; automated artifact builds with Maven and version-controlled through Nexus Repository Manager.
- ▶ Led incident management and 24x7 production support for critical insurance applications — systematic troubleshooting and root-cause analysis to ensure platform health.

EDUCATION

Bachelor's Degree in Computer Applications · Vignan Degree College, Shadnagar · Dec 2022 · GPA: 70%
